

## **Regal Rexnord to showcase unified motion expertise at Medical Technology UK 2026**

**27 January 2026**

**Regal Rexnord will be exhibiting at Medical Technology UK 2026, taking place 11–12 March 2026 at the Coventry Building Society Arena, where visitors will meet its expert team at Stand 31 and explore how integrated motion solutions and collaborative engineering support help accelerate medical device development.**

At the event, Regal Rexnord will highlight the combined capabilities of its leading motion control brands, including Portescap and Thomson. These each bring decades of experience in motion design for medical applications such as surgical hand tools, surgical robotics, imaging systems, and laboratory automation. By uniting these technologies under one roof, Regal Rexnord enables medical device OEMs to address complex motion challenges with a single, trusted partner.

Medical innovation increasingly depends on motion systems that perform reliably as part of a complete design. Regal Rexnord supports this need by offering everything from precision components to fully integrated motion subsystems. By combining motors, linear motion, controls, and supporting technologies across its brands, the company helps OEMs simplify integration, reduce development risk, and streamline the path from concept to production.

One key focus at Medical Technology UK will be Regal Rexnord's collaborative approach to device development. Engineers from across Regal Rexnord work directly with OEM teams, providing support from the earliest design stages. This early involvement enables more informed design decisions, faster prototyping and

iteration, and motion solutions optimized for performance, reliability, and manufacturability.

With access to scalable manufacturing, 16 ISO-9001 certified facilities worldwide, and a stable global supply chain, Regal Rexnord supports medical device programs from prototyping to full production. OEMs can select from standard products, fully customized designs, bundled solutions, or integration-ready subsystems, depending on their requirements and development timelines.

Visitors to Stand 31 at Medical Technology UK 2026 will have the opportunity to discover how Regal Rexnord's integrated motion portfolio supports seamless performance across the full device lifecycle.

## About Regal Rexnord AMC

At Regal Rexnord, we create a better tomorrow with sustainable solutions that power, transmit, and control motion. Focused on customer needs and committed to sustainability, we harness innovation to transform industries and create a brighter future. From high-performance, precision motion control systems that power surgical robots, humanoids, satellites, and unmanned aerial vehicles, to advanced automation systems that optimize motion across factory floors, to precision-engineered power transmission components and innovative air moving solutions that drive efficiency, our technologies fuel progress.

Utilizing our deep knowledge of the unique motion needs of the industries we serve -- robotics, aerospace, space, defense, medical, data centers, factory automation, renewable energy, agriculture, construction, and more -- we collaborate with our customers and serve as trusted advisors to deliver optimized solutions. Customer-focused innovation drives us, and our global network of design and manufacturing centers enables us to effectively engineer and reliably produce the complex solutions required to drive progress all around the world.

Headquartered in Milwaukee, Wisconsin, and with a worldwide presence of over 200 locations and 30,000 associated dedicated to customer success, Regal Rexnord (NYSE: RRX) empowers global industries to thrive sustainably while Creating a Better Tomorrow.
